## Personalised Learning Checklists AQA Trilogy Biology Paper 2

T•	AQA TRILOGY Biology (8464) from 2016 Topic T4.5 Homeostasis and response			_
Topic	Student Checklist	R	Α	G
4.5.1 Homeostasis	Describe what homeostasis is and why it is important stating specific examples from the human body			
4. Home	Describe the common features of all control systems			
ے ۔	State the function of the nervous system and name its important components			
ma ten	Describe how information passes through the nervous system			
hu Sys	Describe what happens in a reflex action and why reflex actions are important			
The us	Explain how features of the nervous system are adapted to their function, including a reflex arc (inc all			
4.5.2 The human nervous system	types of neurone and the synapse)			
4.5 ne	Required practical 7: plan and carry out an investigation into the effect of a factor on human reaction time			
	Describe the endocrine system, including the location of the pituitary, pancreas, thyroid, adrenal gland, ovary and testis and the role of hormones			
	State that blood glucose concentration is monitored and controlled by the pancreas			
	Describe the body's response when blood glucose concentration is too high			
	Explain what type 1 and type 2 diabetes are and how they are treated			
	HT ONLY: Describe the body's response when blood glucose concentration is too low			
SL	HT ONLY: Explain how glucagon interacts with insulin to control blood glucose levels in the body			
nar	Describe how water, ions and urea are lost from the body			
μ	Describe the consequences of losing or gaining too much water for body cells			
2.	HT ONLY: Recall that protein digestion leads to excess amino acids inside the body and describe what			
ö	happens to these			
nat	Describe how the kidneys produce urine			
oordi	HT ONLY: Describe the effect of ADH on the permeability of the kidney tubules and explain how the water level in the body is controlled by ADH			
4.5.3 Hormonal coordination in humans	Describe how kidney failure can be treated by organ transplant or dialysis and recall the basic principles of dialysis			
Ē	Describe what happens at puberty in males and females, inc knowledge of reproductive hormones			
¥	Describe the roles of the hormones involved in the menstrual cycle (FSH, LH and oestrogen)			
5.3	HT ONLY: Explain how the different hormones interact to control the menstrual cycle and ovulation			
4	Describe how fertility can be controlled by hormonal and non-hormonal methods of contraception (giving specific examples from the spec)			
	HT ONLY: Explain how hormones are used to treat infertility, inc the steps in IVF			
	HT ONLY: Evaluate the risks and benefits of fertility treatments			
	HT ONLY: Describe the functions of adrenaline and thyroxine in the body, and recall where they are produced			
	HT ONLY: Explain the roles of thyroxine and adrenaline in the body as negative feedback systems			
ant 1es	Required practical 8: investigate the effect of light or gravity on the growth of newly germinated seedling			
4.5.4 Plant hormones	HT ONLY: Explain the use of plant growth hormones are used in agriculture and horticulture (auxins, ethene and gibberellins)			

## Personalised Learning Checklists AQA Trilogy Biology Paper 2

	AQA TRILOGY Biology (8464) from 2016 Topic T4.6 Inheritance, variation and evolution			
Topic	Student Checklist	R	Α	G
•	Describe features of sexual and asexual reproduction			
	Describe what happens during meiosis and compare to mitosis			
	Describe what happens at fertilisation			
	Describe the structure of DNA and its role in storing genetic information inside the cell			
4.6.1 Reproduction	Explain the term 'genome' and the importance of the human genome (specific examples from spec only)			
	Describe how characteristics are controlled by one or more genes, including examples			
	Explain important genetic terms: gamete, chromosome, gene, allele, genotype, phenotype, dominant,			
	recessive, homozygous and heterozygous			
e E	Explain and use Punnet square diagrams, genetic crosses and family trees			
1 R	HT ONLY: Construct Punnet square diagrams to predict the outcomes of a monohybrid cross			
1.6	Describe cystic fibrosis and polydactyly as examples of inherited disorders			
,	Evaluate social, economic and ethical issues concerning embryo screening when given appropriate			
	information			
	Describe how the chromosomes are arranged in human body cells, including the function of the sex			
	chromosomes			
	Explain how sex is determined and carry out a genetic cross to show sex inheritance			
=	Describe what variation is and how it can be caused within a population			
Ĕ	Describe mutations and explain their influence on phenotype and changes in a species			
Ιον	Explain the theory of evolution by natural selection			
4.6.2 Variation and evolution	Describe how new species can be formed			
au	Describe what selective breeding is			
<u>.o</u>	Explain the process of selective breeding, including examples of desired characteristics and risks			
ja t	associated with selective breeding			
Var	Describe what genetic engineering is, including examples, and how it is carried out			
5.2	Explain some benefits, risks and concerns related to genetic engineering			
4.6	HT ONLY: Explain the process of genetic engineering, to include knowledge of enzymes and vectors			
int f	Describe some sources of evidence for evolution			
3 The development understanding of	Describe what fossils are, how they are formed and what we can learn from them			
el Igi	Explain why there are few traces of the early life forms, and the consequences of this in terms of our			
lev. star	understanding of how life began			
e d Jers	Describe some of the causes of extinction			
i i	Describe how antibiotic-resistant strains of bacteria can arise and spread (inc MRSA)			
4.6.3 of	Describe how the emergence of antibiotic-resistant bacteria can be reduced and controlled, to include			
4	the limitations of antibiotic development			
4.6.4 Classification	Describe how organisms are named and classified in the Linnaean system			
	Describe and interpret evolutionary trees			
4 lass	Explain how scientific advances have led to the proposal of new models of classification, inc three-			
S	domain system			

## Personalised Learning Checklists AQA Trilogy Biology Paper 2

	AQA TRILOGY Biology (8464) from 2016 Topic T4.7 Ecology			
Topic	Student Checklist	R	Α	G
, nd	Recall what an ecosystem is			
4.7.1 Adaptations, interdependence and competition	Describe which resources animals and plants compete for, and why they do this			
.1 Adaptatio dependence competition	Explain the terms 'interdependence' and 'stable community'			
apt inde	Name some abiotic and biotic factors that affect communities			
Ad epe	Explain how a change in an abiotic or biotic factor might affect a community			
7.1 erde	Describe structural, behavioural and functional adaptations of organisms			
4.	Describe what an extremophile is			
4.7.2 Organisation of an ecosystem	Represent the feeding relationships within a community using a food chain and describe these			
Jo t	relationships			
tior	Explain how and why ecologists use quadrats and transects			
isat yste	Describe and interpret predator-prey cycles			
rganisatio	Required practical 9: measure the population size of a common species in a habitat. Use sampling to			
Org	investigate the effect of one factor on distribution	_		
7.2	Describe the processes involved in the carbon cycle			
4	Describe the processes involved in the water cycle			
an	Describe what biodiversity is, why it is important, and how human activities affect it			
hum	Describe the impact of human population growth and increased living standards on resource use and waste production			
t of ms	Explain how pollution can occur, and the impacts of pollution			
fect	Describe how humans reduce the amount of land available for other animals and plants			
eff	Explain the consequences of peat bog destruction			
the	Describe what deforestation is and why it has occurred in tropical areas			
no on	Explain the consequences of deforestation			
odiversity and the effect of interaction on ecosystems	Describe how the composition of the atmosphere is changing, and the impact of this on global			
act	warming	_		L
live	Describe some biological consequences of global warming			
4.7.3 Biodiversity and the effect of human interaction on ecosystems	Describe both positive and negative human interactions in an ecosystem and explain their impact on biodiversity			
4.7.3	Describe programmes that aim to reduce the negative effects of humans on ecosystems and biodiversity
